Hi Erica. From time to time our site assignments are re-evaluated. Earlier today, I was informed that I am no longer assigned to the Matteo site. My colleague Tom, who I have cc'd, is now the RPM for Matteo OU 1. Best, Larry (212.637.4423)

Subject: FW: Matteo & Sons Sampling Results

Larry,

I am managing the Solvay site, which is near the Matteo Bros site, just south along the Delaware River. Solvay has mostly PFNA in terms of highest concentration compared to other PFAS, which is the contamination profile in many of the Matteo Bros wells. It seems that Solvay's discharge may have impacted the Matteo Bros site, possibly due to the surface water to groundwater pathway. Solvay historically discharged PFAS to the Delaware River, which has a hydraulic connection to the PRM aquifer; many of the impacted wells in the area are located near tidal tributaries.

With that said, there are some wells at Matteo with high concentrations of PFOS, which is found at low concentrations at Solvay. So, there may have been a secondary source of PFAS coming from another site or directly from the Matteo site itself (i.e., AFFF fire fighting foam).

Can you copy me on any additional groundwater results and/or any reporting done at Matteo relative to PFAS?

Thanks,

Erica Bergman

Subject: [EXTERNAL] Matteo & Sons Sampling Results

Erica, recently the property owners at the Matteo & Sons facility located on Crown Point Road in West Deptford agreed to let Solvay sample wells on their property. That sampling was conducted in September 2019. Attached is the transmittal to the property owner, including a summary of results. In addition, I am including a map showing the locations of wells sampled.

Following a discussion between [REDACTED] and [REDACTED], the results were called into the hotline by [REDACTED] and Case No. 19-10-21-16-10-14 was established.

Please let us know if you have any questions. Regards, [REDACTED]
